UCSF Brain Tumor Center

Adult Neuro-Oncology

The UCSF Brain Tumor Center is one of the largest and most comprehensive programs for brain tumor treatment in the United States. The adult neuro-oncology team of doctors and nursing staff collaborate closely with our multi-disciplinary colleagues in Neurosurgery, Neuropathology, Neuroradiology and Radiation Oncology to develop and provide the most advanced treatment options.

OUR RESEARCH EFFORTS span the basic, translational and clinical areas. Working with our scientific colleagues, we translate their discoveries into treatments through the design and conduct of clinical trials.

OUR SUPPORTIVE CARE SERVICES team offers diverse, holistic services to ensure the best possible care for you and your family.

Supportive Care Services

Sheri Sobrato Brain Cancer Survivorship Program

Our team of specialists have partnered with our survivors to create programming that help them better cope with the physical, emotional and cognitive effects of brain cancer and treatment. We do this through educational offerings and resources, integrative medicine classes, exercise counseling and individual consultations that help survivors identify and achieve their wellness goals. We also offer group support that provides information and a forum to build relationships and community.

Gordon Murray Caregiver Program

The Caregiver Program is designed to support patient families, prepare them for their caregiver role, and optimize the quality of life for both the patient and caregiver across the illness trajectory. A dedicated caregiver team supports the caregiver throughout the treatment of the patient's disease by offering education, practical health information, emotional and group support and access to caregiver resources.

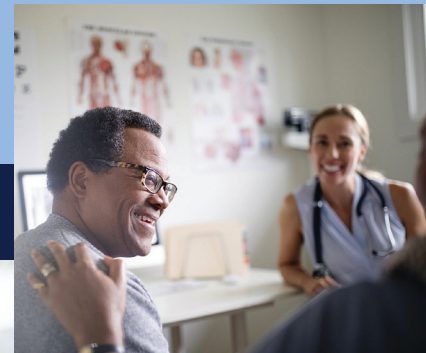

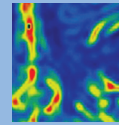

Neurocognitive Clinic

Forgetfulness and difficulties managing stress are common after a brain tumor diagnosis and we are here to help. Our specialists in the UCSF Neurocognitive Care Clinic can help you and your loved ones better understand and work on improving thinking skills, and provide emotional support. We can help you and your loved ones learn new ways to live well and adjust to those changes.

Social Work

Our Neuro-Oncology social workers meet with new patients, assessing each person's individual emotional and practical needs. The social workers provide information and education on insurance, disability benefits, transportation, lodging, advanced care planning, palliative care, hospice, and other supportive services at UCSF and in the community.

Palliative Care

The UCSF Symptom Management Service provides specialized, interdisciplinary medical care focused on symptom relief, quality of life, and advance care planning for individuals living with serious illness and their loved ones. Our embedded palliative medicine providers work closely with your Neuro-Oncology team to help you live as well as possible for as long as possible, at every stage of your health journey.
